Roll-out of the new government traceability system for residual hazardous materials

Longueuil, November 18, 2026 – Attestra is pleased to announce that the government's traceability system for residual hazardous materials, **Traces Québec – MDR**, is now available. As of today, the enterprises subject to the new reporting requirements – including shippers, consignees (generators and receivers) and transporters of residual hazardous materials – can register in anticipation of the entry into force, on 1 January 2027, of the regulatory provisions setting out the new reporting procedures.

Developed by Attestra on behalf of the Government of Québec, **Traces Québec – MDR** aims to make the management of residual hazardous materials simpler, better regulated, more transparent and safer in Québec.

The organizations affected by these new regulations will be invited to explore **Traces Québec – MDR** and familiarize themselves with how the system works.
